INSTALLATION & SYSTEMS SERVICE

COMPLETE INSTALLATION AND SERVICE
OF INTEGRATED SYSTEMS

SCHEDULED MAINTENANCE

Automation equipment requires regular scheduled maintenance to ensure optimal performance and longevity. Our technicians do a full system inspection to check on all components within the system and report on what areas may need upcoming service. We offer maintenance intervals according to manufacturer recommended schedule and operational needs.

Service includes lubrication, calibration, cleaning, and inspection of critical components.

TROUBLESHOOTING

When automation equipment malfunctions or experiences issues, troubleshooting becomes crucial. Our automation technicians will help find the source of the problem to get your equipment back up and running.

HEALTH ASSESSMENTS

Our technicians will provide a one-time walk-through and check on all components within the system and produce a report on the next components that might need to be addressed or recalibrated.

COMPONENT REPLACEMENT

If a faulty component is identified during troubleshooting, it may need to be replaced. Our team will help ensure to get component replacement parts from the equipment manufacturer or authorized suppliers. Our team provides proper component removal and installation, paying special detail to any calibration or alignment requirements.

SOFTWARE UPDATES

Automation equipment often relies on software systems to operate efficiently. We can help you stay updated with the latest software versions and firmware releases provided by the manufacturer.

INSTALLATION SERVICES

Advanced Intralogistics provides the complete installation of integrated systems and storage solutions like Vertical Lift Modules (VLMs) and Automated Storage Retrieval Systems (AS/RS) throughout your facility.

AI360 PROCESS

CONTINUOUS IMPROVEMENT & LIFE CYCLE MANAGEMENT

As part of the AI 360 Process, our experts and technicians will help ensure your intralogistics system maintains its resilience against changing conditions in the industry or supply chain through preventative maintenance, scheduled service, and emergency service when needed.

AUTOMATION AND INTEGRATED SYSTEMS INSTALLATION

Many of today's high-tech warehouse solutions require both mechanical and technical expertise for proper installation, repair and maintenance. At Advanced Intralogistics, your critical systems will always be in the hands of experienced technicians and installers who know the ins-and-outs of these complex instruments, as well as how to keep them operating in peak condition for as long as possible.

- AS/RS
- CONVEYOR
- VLMs
- AND MORE!

INNOVATION DOESN'T STOP AT INSTALLATION
